

NuTech Green Initiatives

NuTech, Inc. is committed to identifying and implementing green initiatives where possible throughout all aspects of our business. Our current initiatives include: combined vendor ordering, facilities power saving strategies, green deliveries, managed printing, and web and video conferencing. More specific information on each of these initiatives follows below.

Combined Vendor Ordering

NuTech limits the number of vendors and combines orders whenever possible to limit the impact to the environment by decreasing the amount of waste from shipping supplies and fuel consumption and waste associated with multiple deliveries.

Facilities Power Saving Strategies

NuTech employs multiple green initiatives in reducing the amount of power that our facilities consume. We recommend shutting down your office computer, monitor and printer at the end of the workday or during any periods of extended absence. All computers and monitors are set to shut down and monitors after a period of one hour no usage. All *NuTech* facilities are equipped with programmable thermostats that limit the amount of energy used when the facilities are unoccupied. Additionally, the air conditioning in our facilities is zoned so that energy is not wasted in unused portions of our buildings. *NuTech's* Corporate Headquarters is equipped with an energy recovery unit on the air conditioning system to limit the energy consumption. *NuTech's* future commitment to sustainability includes the planned installation of solar panels to our Corporate Headquarters.

Green Deliveries

NuTech is committed to employing green strategies in all of the deliveries to our customers. We combine multiple orders to a destination and we combine orders to facilities in close proximity to each other in order to minimize fuel consumption. Our vehicles are well maintained, with oil changes according to a schedule and tires inflated to the proper pressure in order to minimize fuel consumption as well. We also seek to maintain sustainability by employing hybrid vehicle technology when possible, and the use of "eco" modes on our vehicles.

Web and Video Conferencing Services

In our continuing efforts to enrich support for sustainability, we are pleased to announce the availability of web and video conferencing services.

Eco-Friendly Phone Books

As part of our sustainability efforts, we hope you will elect to use an eco-friendly online AT&T phone directory instead of the traditional paper-based phone books.
